

NAME

sc_wartsdump — verbose dump of information contained in a warts file.

SYNOPSIS

sc_wartsdump [*file* . . .]

DESCRIPTION

The **sc_wartsdump** provides a verbose dump of information contained in a sequence of warts files. While the output is structured and suitable for initial analyses of results, the format of the output is not suitable for automated parsing and analysis as the output of **sc_wartsdump** will change overtime with no regard to backwards compatibility. Analyses of the contents of a warts file should be made using specialised programs which link against the scamper file API.

EXAMPLES

The command:

```
sc_wartsdump file1.warts file2.warts
```

will decode and print the contents of file1.warts, followed by the contents of file2.warts.

The command:

```
gzcat file1.warts.gz | sc_wartsdump
```

will print the contents of the uncompressed file supplied on stdin.
